- Assistance to purchasers in a competent choice of production;

Body on certification of production of food mechanical engineering and test laboratory

Written by Concerning certification of production of food mechanical engineering to address to Olga Kozhevnikova by phone: +7(495) 676-6751, an e-mail: ospm@vniimp.ru

- Increase of competitiveness of production in the Russian and international markets;
- Creation of conditions for maintenance of free moving of the goods on territory of the Russian Federation, for realization of the international economic, scientific and technical cooperation and international trade.

Conformity acknowledgement in territory of the Russian Federation can carry voluntary and a binding character. In 2009 there was an important change in sphere of our activity: the technical regulations «About safety of cars and the equipment» have been entered. Obligatory acknowledgement of conformity is spent only in the cases established by corresponding technical regulations, and is exclusive on conformity to requirements of technical regulations. The form and schemes of obligatory acknowledgement of conformity can be established only by corresponding technical regulations.

With the advent of technical regulations about safety of cars and the equipment there were some changes in the process of certification, there were changes in the list of the equipment of a subject of obligatory certification, new schemes of certification have been entered, introduction of obligatory tests of the equipment in the accredited test laboratories was made. Terms of works on conformity acknowledgement are defined with each client personally; rendered services are subject to payment on the basis of the contract with the applicant.

If it is necessary for you to make certification of your equipment or simply to receive consultation on the questions, concerning quality acknowledgement, address to us.
