Technically fitted Center carries out improvement of professional skill of shots of all specialties of workers of branch: technologists and masters of primary processing of cattle, sausage and canning manufactures, manufactures of a children's and special food; veterinarians, experts in standardization and certification, economists, quality control services (chemists, microbiologists, histologists, radiologists, tasters) and technical services (main engineers, main mechanics, metrologists). Training and working trades is simultaneously carried out. The lecturing structure is presented by the Russian and foreign experts (Sweden, Austria, Germany, Italy, Spain, etc.) That allows carrying out training of listeners at world level. The lecture material is accompanied by practical developments on the module, the modern European industrial equipment consisting of industrial units, allowing developing any meat production, having finished it to full readiness and representing to its listeners for tasting. The high share of a practical training and their presentation allow fixing the received knowledge. Programs of seminars are constantly updated taking into account real requirements and working conditions of the enterprises within a year.

Upon termination of training to listeners the certificate on improvement of professional skill (on the basis of the License) stands out.

The plan of work of the Educational center created on base and at direct participation of the All-Russian Meat Research Institute, for the 1st half-year of 2012:
